Project 2 – Market

Description:

We need to develop an application which, when started, presents the user with a menu where it is possible to register, list and buy products, in addition to viewing the shopping cart or exiting the application.

When adding a product to the shopping cart, check whether the same product already exists in the cart, simply by changing the quantity.

At the end of the purchase, the user must be presented with the total according to the products and quantities entered in the shopping cart.
